Criteria	Ratings
This criterion is linked to a learning outcome Part 1: Functions Functions are implemented correctly: 1 Point	Full marks Not solved/Partial Up to -1 points if functions do not work as intended.
This criterion is linked to a learning outcome Part 1: Exports Functions are exported correctly (using Node.js format and with the intended names and parameters): 1 Point	Full marks Not solved/Partial Up to -1 points if exports do not work as intended.
This criterion is linked to a learning outcome Part 1: Usage Module is imported and called correctly: 1 Point	Full marks Not solved/Partial Up to -1 points if usage is not as intended.
This criterion is linked to a learning outcome Part 2: Server runs Server runs successfully and on the right URL/Path (localhost instead of 127.0.0.1 is permitted): 1 Point	Full marks Not solved/Partial Up to -1 points if server startup not as intended.
This criterion is linked to a learning outcome Part 2: Operation not supported Any path that is different from /divide causes an "Operation not supported" with correct content type and response code: 2 points.	Full marks Not solved/Partial Up to -2 points depending on severity. E.g.: Response code wrong: -0.5 points, content-type wrong: -0.5 points, some URLs allowed: -1 points.
This criterion is linked to a learning outcome Part 2: Divide with wrong parameters Calling /divide with missing parameters or additional parameters causes an "Operation not supported" with correct content type and response code: 2 points.	Full marks Not solved/Partial Up to -2 points depending on severity. E.g.: Response code wrong: -0.5 points, content-type wrong: -0.5 points, divide with other params allowed: -2 points.
This criterion is linked to a learning outcome Part 2: Divide with correct parameters Calling /divide with correct a/b parameters causes the correct return with correct content type and response code: 2 points.	Full marks Not solved/Partial Up to -2 points depending on severity. E.g.: Response code wrong: -0.5 points, content-type wrong: -0.5 points, parameters cannot be inverse (b first, a second): -1 points.
