SC-T-213-VEFF - Web Programming I

Lab Assignment 2 – HTML + CSS
Grading Instructions

Reykjavik University   Deadline: **1st February 2019, 23:59**

The topic of this assignment is: **Styling HTML code using CSS**.

1   Point distribution

Each lab assignment is awarded between 0 and 10 points. The assignment is graded in a way that it starts initially with 10 points and points are deducted according to the lists below, depending on which shortcomings exist in a student's solution. If the final score ends up below 0 points due to point deductions, it is automatically set to 0.

2   Styling an HTML document

The grading for this assignment follows closely the list of requirements stated in the assignment. If they are not or only partially fulfilled, points are deducted from the highest possible amount (10 points) according to the following list. Unless stated otherwise, points are only deducted once for the same mistake.

1. The final style has substantial differences to the provided screenshot *final.jpg*: -1 point per major difference. In the following, we provide a detailed list of what is and is not OK.

   - Colour: The colour can differ from the screenshot as long as it still contains the same hue. For example, the header has to be grey (any type of), the table header has to be a shade of green/blue.

   - Font style/size: Font family does not matter - in the solution we use the browser default. Sizes and font weights should be so that they can be clearly distinguished (e.g., the h1 heading being larger than h2, the paragraph size being smaller than h2 and not bold). The font weight of the items in the second list should be bold (e.g., "1xx (Informational):").

   - Positioning: The alignment has to be correct (header central, table central).

   - Sizing: The header has to have a clearly smaller width than the text. The table has to have a clearly smaller size than the text (and than the header). The first list has to have a clearly smaller width than the text.

   - Box model: There has to be a clearly identifiable padding in the heading and the first list. The borders in the heading, first list, and table have to be of the same colour (hue) and style as in the screenshot. Minor differences in width are permitted.

   - Table: The table should have a clear shadow, no horizontal borders or gaps (meaning, most likely, collapsed borders), and white font in the heading.

2. The hovering style of the table is different from *table_hovering.jpg*: -1 point. Important is that the hovering behaviour exists. For the exact style, the same guide as above applies.

3. The hovering style of the absolute links (to the RFCs) is different from *link_hovering.jpg*: -1 point. It also leads to point deductions when the remaining two links (to sections) have the same style (they should be left untouched)! For the exact style, the same guide as above applies.

4. External CSS files (e.g., Bootstrap) have been used: at least -1 point - TAs decide based on severity.

5. The CSS document does not validate as correct CSS with the *CSS Level 3 + SVG* profile in the W3C CSS Validator (`https://jigsaw.w3.org/css-validator`): -1 point per validation error.

3   Exceptions/Allowances

There are several things that are explicitly OK:

- The filename is not *style.css*, but changed according to the submission system (e.g., *style-2.css* when the file has been submitted twice).

Late submissions

Late, corrupted, empty submissions are graded 0.
